## **CAPABILITY LISTING**

### **1.0 Introduction**

This Capabilities List has been prepared in accordance with the current Federal Aviation Regulations (FAR's) and the policies of Segers Aero Corporation. Segers Aero Corporation is a certified Repair Station with Limited Ratings as noted on the Repair Station Operation Specifications and the Repair Station Capabilities List.

Due to changes occurring in the aviation industry, this list may be revised from time to time. The Capabilities List will be revised only when the repair station elects to add or delete an article. To allow for timely, accurate revisions, this manual incorporates a records revision page and a list of effective pages. This manual is only structured to include only those powerplants, components and accessories that are authorized to be maintained, repaired and overhauled by Segers Aero Corporation as approved by the Federal Aviation Administration (FAA).

The Accountable Manager is responsible for ensuring that the Repair Stations' Capability List is consistent with the Repair Station Ratings. The Director of Quality will ensure that a self-audit is completed before placing an article on the Capabilities List which are authorized for maintenance, (including inspection), preventive maintenance, or alteration by Segers Aero Corp as approved by the FAA.

### **2.0 Purpose**

The purpose of this document is to provide a listing of the engines, components and accessories to be maintained, repaired or overhauled under Segers Aero Corporation's Limited Powerplant Rating in accordance with the approved Repair Station Manual, manufacturer's instructions for continued airworthiness and FAA regulations

### **3.0 Scope**

In accordance with the limited Powerplant Rating, the Repair Station Operation Specifications and the FAA regulations, only those engines, components and accessories on the capabilities list will be maintained, repaired, altered or overhauled by Segers Aero Corporation Repair Station.

### **4.0 Revision**

When changes or additions to the Capability List are required the President will coordinate with the Director of Quality and a self-audit will be accomplished. Form: "QC-Self Audit" located in Appendix A of the SAC Repair Station Manual (RSM) will be used to establish the readiness of the shop before adding a new article to the Capability List. The audit will include a verification of tooling, equipment and manuals. The revision procedures enable this repair station to revise this capabilities list to ensure it meets Segers Aero Corp needs and is consistent with all regulatory requirements. Any revisions to the list will require new Record of Revision page with the new Revision Number and date of authorization. These changes will be submitted to the FAA for approval after a self-evaluation has been accomplished. The FAA shall be notified within 5 business days of a revision.
